

## (MS523) GM CROPS AND VACCINES [SCREENER]

### Intro

Thank you for participating in this short survey. We are interested in your perceptions of technology, health, and safety as well as your political views. We are only interested in your perspective – there are no right or wrong answers to any of these questions.

Scientists have added genes to certain food crops to make them insect resistant and herbicide tolerant. These are called genetically modified (GM) crops. Examples of GM crops in the U.S. include some corn, soybeans, and canola. The next question is about GM food made from these crops.

Do you think it is unsafe or safe to eat GM food?

A vaccine imitates an infection without inducing the disease, and leads the immune system to develop immunity to that disease. The next question is about vaccines currently recommended for children (childhood vaccines), such as the measles, mumps, rubella (MMR) vaccine or the tetanus, diphtheria, and pertussis (Tdap) vaccine.

Do you think childhood vaccines are unsafe or safe for healthy children?
