

(MS537) HEALTH NETWORKS STUDY [FOLLOW UP W02]

intro

Thank you for choosing to continue participating in the ALP Health Networks study! This is the second in a series of surveys that you will be asked to complete. Each survey will be conducted on the ALP platform and labeled as part of Health Networks. You should see the ALP Health Networks logo on the surveys and in invitation emails. Your consistent and continued participation in these surveys is very important. Your reward for completing this survey will be \$31, and you will be invited to complete follow-up surveys two more times (one per year), each with their own rewards. We are interested in how people's health and social networks change over time. Once a year, for the next three years, you will be asked to complete a two-part survey. The first part will be about your own health and health behaviors. The second part will be about your social network – your friends, family, co-workers, and people you pass the time with. Don't worry, we will not ask you for their full names.

We are interested in your perspective and opinions – there are no right or wrong answers to any of these questions. If you are uncertain about the answer to a question, please give your best estimate. This survey focuses on you specifically at the beginning. The last part of the survey will ask you about people that you know, how they might interact with each other, and what you know of their experiences and behaviors. You may notice that the web pages in the last part look a bit different from the usual ALP pages, but you will still see the ALP Health Networks Study logo. Please take the time to complete the whole survey, even if you need to take a break in between. We recommend that you use a device with a large screen, like a desktop computer or a laptop, rather than a mobile phone or tablet to complete this survey. Please click "Next" to continue.

In the following question, please answer based on what you know and have heard about this year's novel coronavirus that was first identified in Wuhan, China (formally called COVID-19), hereafter referred to simply as "coronavirus".

The question will ask you about the percent chance of something happening. The percent chance must be a number from 0 to 100. Here are some descriptions corresponding to different chances of something happening:

Absolutely will not happen= 0 % chance A very small chance= Less than 1% chance A small chance= 2 to 15 % chance A reasonable chance= 15 to 40 % chance A pretty even chance= 40 to 60% chance A big chance= 60 to 85 % chance A very big chance= 85 to 98 % chance Almost certain= More than 99% chance Absolutely certain= 100% chance

You can also think of percent chance as the number of times something happens out of 100.

What do you think is the percent chance that you will get infected with coronavirus (COVID-19) in the NEXT TWELVE MONTHS?

Below you will see a table that shows the network members you named this time across the top and the network members you named last year along the left-hand side. We would like you to mark whether those network members you described last time match to any of the ones you described this time. It's OK if the network members are new this time, because people's networks are always changing! If they are new, you can simply mark that option (No Match) from the list. We have included some information about the network members you told us about last year (gender, age, and how they are connected to you) to help jog your memory and make this matching task easier.
