Well Being 47

**A0 presidential election intro**
In this interview, we will ask you questions about the upcoming general election for President of the United States. The presidential election is scheduled for Tuesday, November 4, 2008. Many of the questions ask you to think about the percent chance that something will happen in the future. The percent chance can be thought of as the number of chances out of 100. You can use any number between 0 and 100. For example, numbers like: 2 and 5 percent may be "almost no chance", 20 percent or so may mean "not much chance", a 45 or 55 percent chance may be a "pretty even chance", 80 percent or so may mean a "very good chance", and a 95 or 98 percent chance may be "almost certain"
