Now we will ask you some questions about future behaviors and uncertain outcomes. In each case, try to think about the whole range of possibilities and think about how likely they are to occur. In these questions, we will ask you about the percent chance of something happening. The percent chance must be a number from 0 to 100. You can also give numbers after the decimal point. Here are some descriptions corresponding to different chances of something happening:

- Absolutely will not happen = 0 % chance
- A very small chance = Less than 1% chance
- A small chance = 2 to 15 % chance
- A reasonable chance = 15 to 40 % chance
- A pretty even chance = 40 to 60% chance
- A big chance = 60 to 85 % chance
- A very big chance = 85 to 98 % chance
- Almost certain = More than 99% chance
- Absolutely certain = 100% chance

You can also think of percent chance as the number of times something happens out of 100.

If a vaccine becomes available for the H1N1 (swine) flu this fall, what are the chances that you would get the vaccine?
