[The following questions are displayed as a table]

Q1_intro Q1_intro

There will be a general election in your state in November, including an election for the member of the US House of Representatives from your district[FL_senate], plus other state and local offices. [FL_senate]spWhat do you think is the percent chance that each of the candidates will win in the election? Please provide percent chance in the table below. The percent chance can be thought of as the number of chances out of 100. You can use any number between 0 and 100. For example, numbers like 2 and 5 percent may be 'almost no chance', 20 percent or so may mean 'not much chance', a 45 or 55 percent chance may be a 'pretty even chance', 80 percent or so may mean a 'very good chance', and 95 or 98 percent chance may be 'almost certain'.
