What is the percent chance that you will vote in the 2020 Presidential election?

The percent chance can be thought of as the number of chances out of 100. You can use any number between 0 and 100. For example, numbers like 2 and 5 percent may be 'almost no chance', 20 percent or so may mean 'not much chance', a 45 or 55 percent chance may be a 'pretty even chance', 80 percent or so may mean a 'very good chance', and 95 or 98 percent chance may be 'almost certain'.

Imagine that voters could choose to vote "against" a candidate instead of "for" a candidate. Each voter still has only one vote. Each "against" vote is called a "negative vote" and is counted as minus one. The candidate who receives more "for" votes after the "negative votes" are subtracted wins the election. If the option to vote either "for" or "against" was available, how would you vote? (You can only select one option)

◯ Trump (trump_for)
◯ (trump_against)
◯ Biden (biden_for)
◯ (biden_against)
◯ Someone else (else_for)
◯ (else_against)
◯ Will not vote (novote)
◯ Not sure (notsure)

C3

[*Not required*]

Would having a "negative vote" option affect your willingness to vote?

○ It would increase my willingness to vote (1)
○ It would reduce my willingness to vote (2)
○ It would make no difference (3)
○ Not sure (4)

C4

[*Not required*]

Would you approve or disapprove of voters being able to choose a "negative vote" option?
○ Strongly approve (1)
○ Somewhat approve (2)
○ Somewhat disapprove (3)
○ Strongly disapprove (4)
○ Not sure (5)
